## Macroscopic Quantum Interference in Superconductors

R. C. JAKLEVIC, J. LAMBE, J. E. MERCEREAU, AND A. H. SILVER

Scientific Laboratory, Ford Motor Company, Dearborn, Michigan

(Received 12 July 1965)

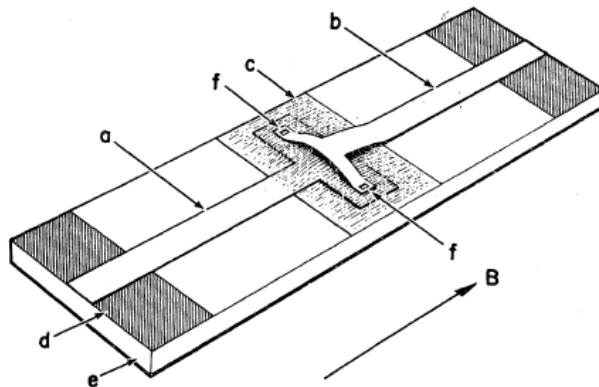

FIG. 1. Reproduction of an oscilloscope trace of a single Sn-SnO<sub>2</sub>-Sn junction showing the single-particle (Giaever) tunneling characteristic ( $V \neq 0$ ) and the dc Josephson supercurrent at  $V=0$ . Current and voltage scales are 0.5 mA/div and 1 mV/div, respectively. The arrows indicate the switching path along the circuit load line taken when the applied current exceeds  $I_{\max}$ .

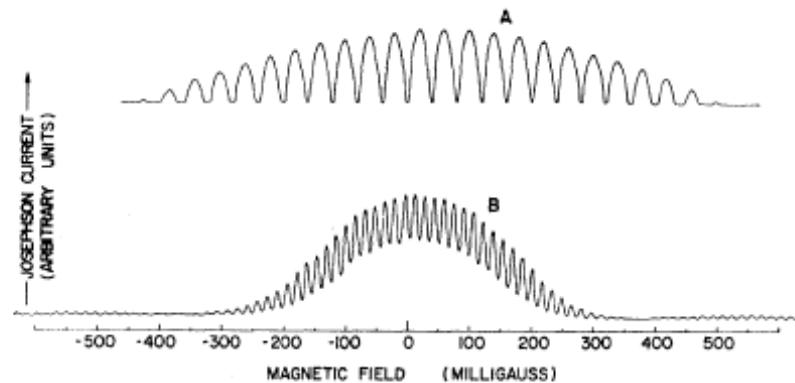

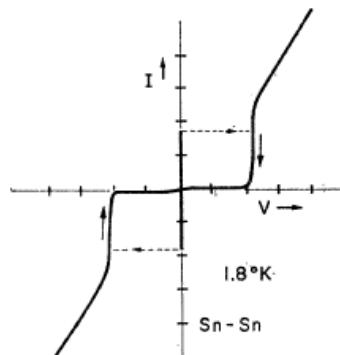

FIG. 7. Experimental trace of  $I_{\max}$  versus magnetic field showing interference and diffraction effects. The field periodicity is 39.5 and 16 mG for  $A$  and  $B$ , respectively. Approximate maximum currents are 1 mA ( $A$ ) and 0.5 mA ( $B$ ). The junction separation is  $W=3$  mm and junction width  $w=0.5$  mm for both cases. The zero offset of  $A$  is due to a background magnetic field.
